annual

report

1962

**U. S. DEPARTMENT OF AGRICULTURE
ASCS STATE OFFICE**

ATHENS, GEORGIA

FOREWORD

This annual report is designed to present a summary of the 1962 Agricultural Stabilization and Conservation Service operations in Georgia.

The report is presented in two parts. Part I consists of an abbreviated presentation of ASCS programs. Part II consists of a detailed presentation with extensive statistical data, reflecting numbers of farms, allotments and program participation by counties.

The fine work done by county and community committeemen, managers and employees is acknowledged. The success of program administration is largely determined by these very dedicated people.

William L. Lanier
State Executive Director

PART 1
ORGANIZATION
AND
PROGRAM DESCRIPTION

THE GEORGIA ASC STATE COMMITTEE

The Agricultural Stabilization and Conservation Service, an agency of the United States Department of Agriculture, carries out programs authorized by the Congress in the field of Supply Management and Conservation Assistance.

ASC State and County Committees are key units in the field organization of the Agricultural Stabilization and Conservation Service.

The ASC State Committee is responsible to the Secretary of Agriculture for the administration of ASCS programs in the State and for the general supervision of the work of ASC county committees.

The Georgia ASC State Committee is composed of five farmers, together with the Director of the Agricultural Extension Service, who serves as ex-officio member of the committee. The Committee is shown on the opposite page. Starting top-left and reading clockwise, they are:

William H. Booth, Chairman
Rufus Adams, Vice-Chairman
James A. Andrews, Member
John B. Bedingfield, Member
John T. G. Collins, Member
L. W. Eberhardt, Jr., Ex-officio Member

**GEORGIA
ASC
STATE
COMMITTEE**

THE GEORGIA ASCS STATE OFFICE STAFF

The day-to-day operations of the Agricultural Stabilization and Conservation Service in Georgia are supervised and directed by the State Executive director under policies established by the ASC State Committee.

The State Executive Director functions with an ASCS State Office staff, consisting of five divisions. These are Administrative, Conservation, Production Adjustment, Price Support-Feed Grain, and Compliance.

Key staff members are shown on the opposite page.

Chief Asst. Chief

THE GEORGIA FARMER-FIELDMAN STAFF

For administrative purposes the counties in Georgia are grouped into 10 districts. The ASCS operations in each ASCS district are supervised by a Farmer-Fieldman, who functions under the direction of the State Executive Director. The district groupings are shown below and the staff is shown on the opposite page.

THE GEORGIA FARMER-FIELDMAN STAFF

Left to right: Paul M. Nix, District 3; George W. Rountree, District 7; J. Verlon Minchew, District 10; Jesse F. Moore, District 8; Joseph A. Bilderback, District 5; Leo Roberts, District 9; Howard G. Baker, District 1; William M. Phillips, District 6; Ronald P. Parker, District 4; Phil M. Hardman, District 2.

THE ASC COUNTY COMMITTEE

Agricultural Stabilization and Conservation County Committees are in charge of local administration of National farm programs. It is the committee's responsibility to make local decisions and to see that the programs are carried out fairly and in accordance with regulations.

County committeemen are elected annually by the farmers in the county and function under the general supervision of the ASC State Committee. The county extension agent is ex-officio a member of the county committee without the power to vote.

County committees are assisted by three-man community committees also elected annually by local farmers. Alternate county and community committeemen are elected so that they may fill vacancies that occur.

Each county committee employs a county office manager who executes the policies of the county committee and supervises the operations of the county office.

Georgia led the Nation in the percent of farmer participation in committee elections in 1962. A complete summary by counties will be found in Part II of this report.

The picture on the opposite page shows a typical county committee in session.

THE ASC COUNTY COMMITTEE

THE ASCS COUNTY OFFICE

There is a local ASCS office in each county in Georgia. A county office manager is responsible to and under the supervision of the county committee. The manager is responsible for the day-to-day operations of the county office including the field operations. He employs and supervises personnel necessary to carry out the assigned programs.

County office employees serving under regular appointments are covered by the Civil Service Retirement System. They are eligible to participate in the Federal employees group life insurance plan and health benefit program. There is also a uniform vacation and sick leave system.

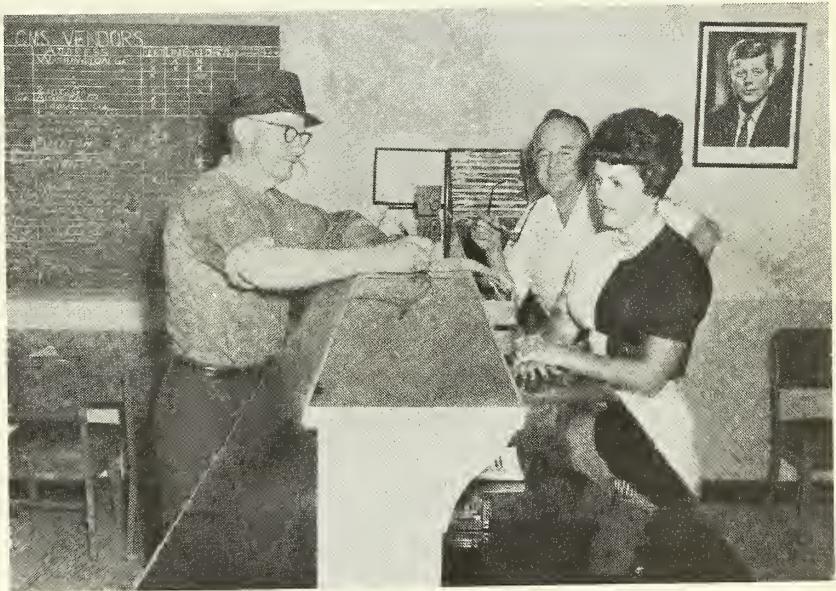

Good working conditions are essential to effective office operations. Considerable effort is being made to improve service to farmers and others by upgrading county office space and facilities. At the beginning of 1962 the Washington office issued standards for county office space. At that time only 13 county offices in Georgia met the standards. During 1962, 8 county offices moved into new space and 83 offices were improved. 42 county offices fully met the standards by the end of 1962. This would not have been possible without the cooperation of the local county governing bodies and county committees.

AGRICULTURAL CONSERVATION PROGRAM - 1962

The purpose of the Agricultural Conservation Program is to help achieve additional conservation on land now in agricultural production rather than to bring more land into agricultural production. Through this program the Federal Government shares with the farmers the cost of carrying out approved soil and water conservation practices which farmers would not carry out to the needed extent without financial assistance.

Under the leadership of the ASC county committees a county program was developed, within the framework of the State and National program, to help meet the soil and water conservation problems in the individual county. The county program was confined to conservation practices on which the Federal cost-sharing was most needed to achieve the maximum conservation benefit in the county. Representatives of other local agricultural agencies and others interested in conservation participated in the development of the county program.

The program is active in all 159 counties. Cost-sharing to establish or improve conservation practices was offered to all farmers. Cost-sharing must be requested by the farmer prior to starting the practice. The extent approved was necessarily based on conservation needs of the farm with emphasis on the urgency of the conservation problem to be treated and the availability of funds for such use. The Government's share of cost for the approved practices represents about fifty percent of the total cost.

Georgia's share of the National ACP program funds is approximately 7 1/2 million dollars. These funds were allocated to the counties based on conservation needs. The entire amount was utilized. A detailed analysis of the use of these funds is contained in the statistical section of this report.

AGRICULTURAL CONSERVATION PROGRAM

Pictured is a Livestock Dam. This is just one of the many practices available to farmers through the ACP for the protection of vegetative cover and the conservation of our natural resources.

THE NAVAL STORES CONSERVATION PROGRAM

In Georgia we are turning with increasing frequency to our timberlands. We call it Multiple Use. Broadly speaking these lands are producing recreation, water, wildlife, forage, wood and naval stores.

From the standing pines of south Georgia is derived gum naval stores, a product of high economic importance, unique to the south Atlantic and Gulf Coast states. The business traces back over 300 years into American history. It was ancient elsewhere when it was first introduced to this continent.

The Naval Stores Conservation Program was established in 1936. Thus 1962 marked its twenty-sixth anniversary. The purpose of the program is to help gum producers do a better job in the woods while conservatively managing the longleaf and slash pine timberlands. The program is administered by the U. S. Forest Service in cooperation with ASCS.

In 1962 a total of 2,681 Georgia producers participated in the program and worked 85 percent of the "cuppage" in the state, or a total of 25,498,242 "faces." For their conservation work they received \$367,910 in cost-shares, or an average of \$137.23 per participant.

There are other interesting factors relating to this activity in Georgia. While the states of South Carolina, Florida, Alabama, Mississippi, Louisiana, and Texas also produce gum, Georgia's output in 1962 represented a calculated 79 percent of the national effort. The net return to its producers, as the raw product left the woods, has been variously calculated from five million to seven and one-half million dollars.

Seven Area Foresters, under the direction of Norman R. Hawley, Program Supervisor at Valdosta, are located in Georgia, as follows:

Charles T. Shea, Waycross
Henry G. Backus, Jesup
Frank E. Fulmer, Claxton
Marion W. Ruffin, Vidalia
Arthur G. Steedley, McRae
Edward O. Powers, Tifton
Jim A. McArthur, Valdosta

These men administer the program.

THE NAVAL STORES CONSERVATION PROGRAM

Homer Durrence of Tattnall Co. Ga., measure slash pine timber on a 58-A. tract which was planted in Dec. 1932 when he was 2 months old. Area Forester Frank Fulmer of the Naval Stores Conservation Program looks on.

Fulmer points out to Durrence the quality of the trees left, following a naval stores operation and a second cut of timber in the life of the stand. A total of \$278.61 per acre in forest products has been removed from the property.

Fulmer and Durrence add up the value in timber still standing. It totals \$282.60 per acre in saw-timber and pulp-wood sizes. Before it goes to market, added growth and naval stores may double this figure.

COMPLIANCE

Work in connection with the determination of acreages and in checking compliance with program provisions is one of the most important jobs in administering ASCS programs. Under this program, ASC State and County committees have the responsibility of determining farmer compliance with acreage allotments, eligibility for price support, eligibility for any payments, spotchecking and premeasurement.

Reporters are hired at the county level to make acreage determinations and to obtain necessary information from farmers. Reporters use aerial photography as the principle method of determining compliance with farm programs. After the reporter plots the field on the aerial photograph the acreage is determined by the use of a precision-built instrument called a planimeter.

In addition to the regular compliance work, the State Committee offers as a service to farmers official premeasurement of acreage prior to planting of the crops. The farmer is required to pay the cost of this service.

COMPLIANCE

The boundary lines
of a field to be
measured are being
plotted on an
aerial photograph.

A reporter is being
trained to measure
acreages where the
crop is planted in
various row patterns.

CONSERVATION RESERVE PROGRAM

The Conservation Reserve is a long-time program to shift land regularly used for the production of crops to a conservation use. Annual Payments will continue to be made for the term of the contracts in effect. Authorization to accept additional contracts ended with the 1960 program year. County offices must check compliance on these contracts each year. Pine trees were the prevalent conservation use in Georgia.

There is a summary of contracts and acres under contract in 1962 in Part II of this report.

PRODUCTION ADJUSTMENT

The objective of the Production Adjustment Programs is to help adjust the production and marketing of farm crops. The program is administered by ASCS through State and County Committees.

In Georgia, acreage allotments are used in an effort to help bring the production of four "basic" crops (cotton, wheat, peanuts and most kinds of tobacco) into line with demand.

When supplies are very large, marketing quotas are used in conjunction with acreage allotments for these four crops if at least two-thirds of the producers voting in referendums approve the quotas. When quotas are in effect, any excess production of the crop is subject to penalties.

A brief summary of these four basic crops follows. Part II of this report contains data by counties with respect to allotted and harvested acreages, production, released and reapportioned acreage and other information.

COTTON

The Secretary of Agriculture is directed by law to proclaim marketing quotas when supplies of cotton are excessive. The quota for 1962 was set at 15,714,000 bales. This quota is converted to a National acreage allotment, which is apportioned to States on the basis of production history. The State apportions this acreage to the counties and from the county each individual farm receives an acreage allotment based generally on his production history.

Before quotas can be placed into effect, at least two-thirds of the cotton producers must approve them in a referendum. Cotton producers voted 96.9 percent in favor of quotas for 1962.

Growers that produce within their farm allotment are generally eligible for price support. Those who overplant their allotment and remain so are not eligible for price support and must pay a penalty on the excess production.

PEANUTS

Peanut allotments and marketing quotas have been in effect since 1949. Allotments are proclaimed by the Secretary of Agriculture. Marketing quotas are placed into effect by two-thirds of the producers voting in favor of quotas.

A National marketing quota is proclaimed. This quota is converted to a National allotment. The allotment is apportioned to States and the State allotment is apportioned to farms on the basis of production history. Peanut allotments were established in 84 Georgia counties in 1962.

To be eligible for price support, a grower must not harvest peanuts in excess of his farm allotment. Any excess production is subject to a marketing quota penalty.

PRODUCTION ADJUSTMENT

Cotton planted in
a skip-row pattern-
Turner County, Ga.

Spanish peanuts planted
in a four-row pattern-
Bulloch County, Georgia

TOBACCO

The Secretary of Agriculture proclaims a National marketing quota for tobacco in pounds. This quota is divided among States and converted to State acreage allotments, which are then divided among tobacco farms in the State.

Growers voting in referendum approved quotas for the 1962, 1963, and 1964 crops. By complying with his acreage allotment, a farmer could market all his production free of penalty and his crop was also eligible for price support.

A lease and transfer provision for tobacco acreage allotments was in effect for the first time in 1962.

Flue-cured tobacco is produced in 68 counties in Georgia and burley tobacco is produced in 15 counties.

WHEAT

Due to excessive supplies of wheat, the Secretary of Agriculture determined that the 1962 National wheat allotment would be 55 million acres. This was the minimum acreage as established by law. Special legislation provided for a 10% reduction in this allotment for 1962 under the Wheat Stabilization Program. This National allotment was apportioned to States. The State allotment was apportioned to counties and the county allotment apportioned to farms, generally on the basis of production history.

A referendum was held in which producers voted in favor of quotas for 1962. Growers who produced wheat in excess of their allotment or an average of the planted acreage in 1959, 1960, 1961 were subject to penalties. Price support was available to producers who complied with regulations.

See the section on 1962 Wheat Stabilization for additional information on the Wheat Program.

PRODUCTION ADJUSTMENT

Flue-cured tobacco production in Coffee County, Georgia.

Wheat production in Polk County, Georgia.

1962 WHEAT STABILIZATION

The 1962 Wheat Stabilization Program was established to reduce the surplus of wheat, cut Government costs, and at the same time to raise farm income. Farmers who desired to participate in the program could earn payments by diverting acreage from the production of wheat to approved conservation use and increase the average acreage of cropland devoted in 1959 and 1960 to designated Soil Conserving crops or practices.

The provisions of the Wheat Stabilization Program required a 10% cut at the farm level in the National allotment of 55 million acres for the 1962 crop. Producers who agreed to stay within their 1962 allotment and to increase their soil conserving uses by a definite minimum amount were eligible for conservation payments and for higher price supports. An additional 30 percent of a grower's wheat allotment could be set aside for that purpose.

The program provided for price support at a National average of \$2 a bushel for producers who complied with their allotments and who participated in the Wheat Diversion Program. It provided diversion payments at 45 and 60 percent, respectively, of the 1961 price support rate times the normal yield times the diversion acres for the minimum and additional diversion.

The table shown in Part II summarizes the participation in the 1962 Wheat Stabilization Program in Georgia.

FEED GRAIN PROGRAM

The objectives of this program were to (a) increase farm income, (b) prevent further buildup of the feed grain surplus, (c) to help assure the consumer of fair and stable prices of meat, poultry and dairy products, and (d) to reduce ultimate feed grain program costs to taxpayers.

The program provided for the voluntary reduction of barley, corn, and grain sorghum acreage from the 1959-1960 base for these crops on individual farms. Diversion payments were made to growers for reducing their acreage of these crops a minimum of 20 percent below the base acreage established for the farm and devoting the diverted acreage to an approved conservation use.

Payments on the minimum diversion and on the diversion in excess of 40 percent of the base were made on 50 percent of the farm's normal production times the support rate for the crop diverted. For additional diversion (up to 40 percent of the base) the payment was at 60 percent of the normal yield times the support rate.

In addition to the payments for diverting the acreage from production of barley, corn, and grain sorghum, producers who participated in this program were also eligible for price support. Non-cooperators were not eligible for price support on these commodities.

A record of participation in this program by counties in the State is shown in the statistical section of this report.

PRICE SUPPORT PROGRAMS

The purpose of price support programs is to stabilize farm income and prices, bring about a better balance between agricultural production and consumption, and assist farmers in the orderly marketing of their crops. Prices are supported through loans, purchase agreements, direct purchases and incentive payments.

Present price support operations are administered through the State and County ASC committees. In 1962 there was price support activity in Georgia on cotton, corn, wheat, oats, soybeans, peanuts, tobacco, honey and wool. A purchase program for fresh peaches was also authorized. Eligibility for price support is determined under the different program regulations.

Loans are the most popular method of price support in Georgia. Loans are made on eligible commodities stored in approved farm storage or in approved public warehouses. The incentive payment to producers is used for wool and unshorn lambs. In 1962, Georgia had a little activity under the purchase agreement and direct purchase method of price support.

A program closely related to price support is the Farm Storage Facility and Mobile Drying Equipment Loans Program. Funds are available through the Commodity Credit Corporation to make loans to producers for the construction or purchase of new farm storage facilities or drying equipment needed on the farm. These facilities must be used for the storage and conditioning of eligible commodities produced on the farm.

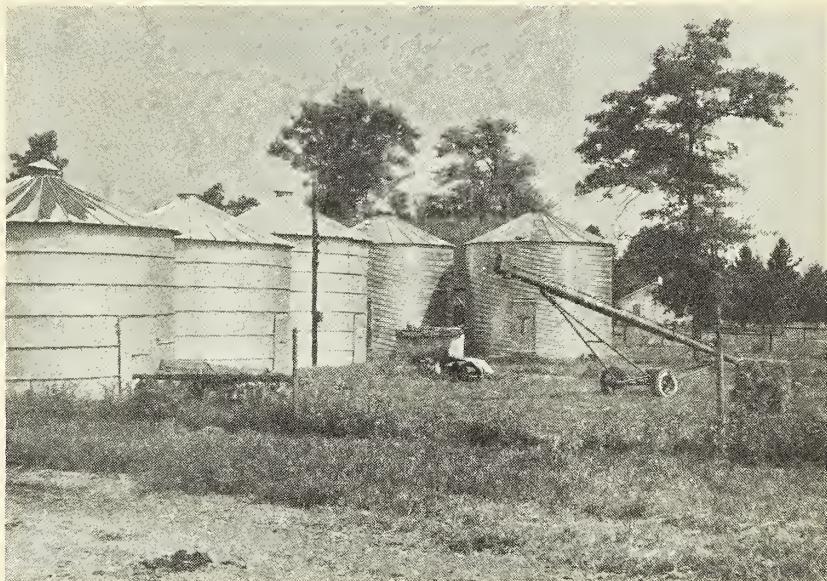

A complete listing of 1962 price support activity by counties is in Part II of this report.

PRICE SUPPORT PROGRAMS

Tobacco price support may be obtained, when the price offered by the buyers does not exceed the specified rate for the official grades.

Price support may be obtained on eligible commodities stored on the farm. Loans are available to help the farmer construct storage facilities such as the ones shown.
